

Ps Framework

For Application and
Crystal Reports Administration

Simplify Crystal Report Maintenance

Use one report for multiple companies, allowing you to build a comprehensive Crystal Reports library, eliminate duplicate reports, and simplify maintenance.

Centralize Application Execution

Ps Framework applications and events are run from a centralized location but can be launched by users anywhere on the network.

Standardize User Desktops

Control user desktops by providing Crystal Reports, applications, documents, and other information from within the Ps Framework.

Reduce Start-up Time

End-users require less training, have less confusion and require shorter start-up time for new applications that are added to the Ps Framework's common delivery environment.

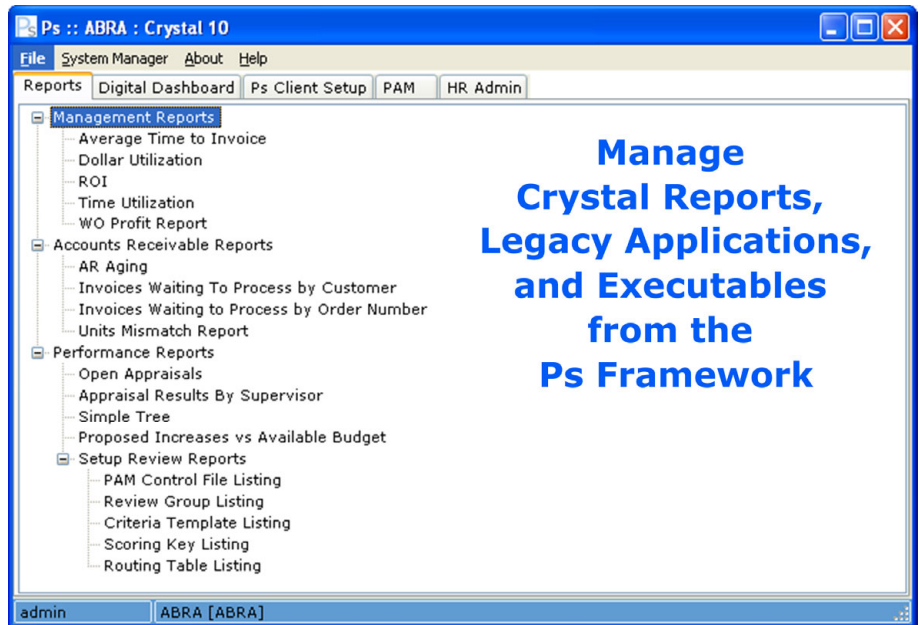

Unified, Secure Environment

Ps Framework fits into your enterprise infrastructure providing a unified, secure environment allowing users to access the applications they need.

Compatibility

- Windows XP Professional
- Terminal Server
- Windows Server 2000 or later

At Perryman Software, we work to help people and businesses realize their full potential.

Originally designed as a delivery environment for Crystal Reports and Perryman custom applications that integrate with Sage Abra and Sage PFW the Ps Framework has evolved to allow the addition of most enterprise applications. Your key enterprise legacy and packaged applications can be added to the Ps Framework, providing all the features and benefits of a unified application environment, saving you time and mission-critical resources.

The Ps Framework allows you to organize Crystal Reports logically and pre-define parameters. For Sage PFW, a single report can be used to access multiple companies. This allows you to build a comprehensive Crystal Reports library, eliminate duplicate reports, and save time revising only one report version.

Adding Crystal Reports, applications, documents, and non-executable information to the Ps Framework is easy with the menu and tab editor. Once in the Ps Framework, users gain access based on their individual and Group security privileges. Users become familiar with the environment, so rolling out new Crystal Reports is simple—just add them to the Ps Framework and provide users with access. You save time and cost by distributing Crystal Reports without installing it on each client system.

For applications that rely on database connections, those connections can be defined within the Ps Framework. You can also send global email for all Ps Framework users. You can run Crystal Reports on-demand or schedule them through the Ps Crystal Scheduler, a separate Perryman Software custom application.

From developing innovative solutions to providing award-winning customer support, Perryman Software is dedicated to surpassing your expectations in all aspects of our business. For more information about Perryman Software applications, contact your local Sage software business partner, call us directly at 800-551-6875, or visit our website at www.perryman-sw.com.
