LightWork analytics
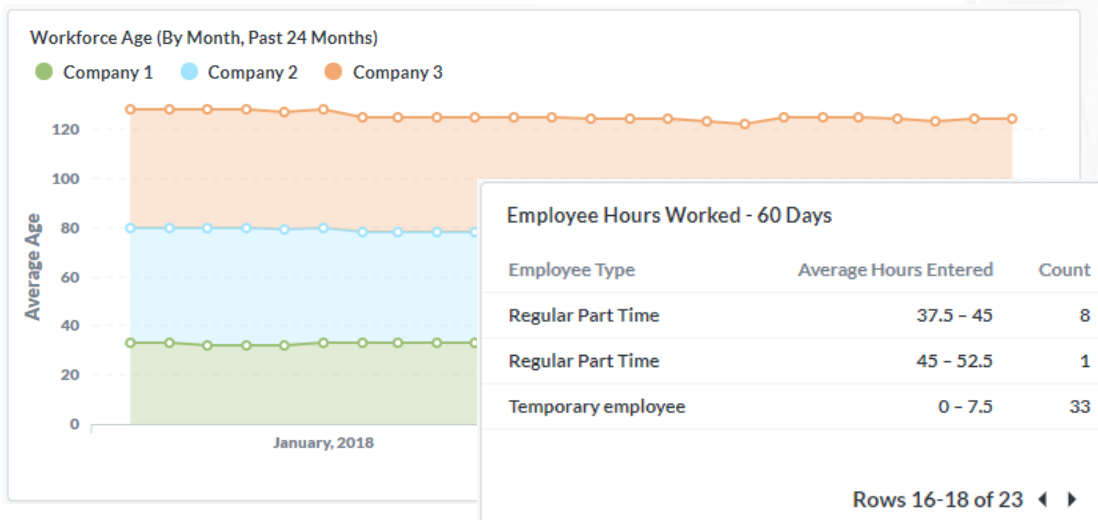

ENHANCED ANALYTIC REPORTING

LightWork Analytics is a business intelligence tool designed to let you ask questions about your data, and display those answers in formats that make sense, whether that is a bar graph or a detailed table.

Your questions can be saved for later, making it easy to revisit them, or you can group questions into great looking dashboards. Then easily share questions and dashboards with the rest of your team.

Workforce Age (By Month, Past 24 Months)
● Company 1   ● Company 2   ● Company 3

Employee Hours Worked - 60 Days

| Employee Type	Average Hours Entered	Count
Regular Part Time	37.5 – 45	8
Regular Part Time	45 – 52.5	1
Temporary employee	0 – 7.5	33

Rows 16-18 of 23 ◄ ►

DASHBOARDS

Your dashboard is a collection of saved questions that you want to refer back to and view regularly. You can do a lot with your dashboard:

- Each user has the ability to **customize** the groups of questions and corresponding answers that are displayed.

- Use the dashboard **filters** to create simple toggles to change a variable for all the cards on a dashboard.

- Drill down using **x-rays** for a fast and easy way to get automatic insights and explorations of your data.

- Connect **other systems** to gain a comprehensive analysis of all data sources.

ALERTS

There are three different kinds of alerts you can set up:

- When a time series **crosses a goal line.**

- When a **progress bar reaches or goes below its goal**.

- When any other kind of **question returns a result.**
