

LIGHTWORK TIME

LightWork Time's biometric timeclock installs easily on your network and supports both hard-wired TCP/IP and optional wireless connections. The standard RS-232 ports let users connect directly to PC and USB host allows users to download data using USB flash drive.

With its stunning 3" color TFT screen for beautiful display of graphics, icons and photos, it is user friendly and can be easily customized by users with special requirements. Managers can even leave SMS messages behind for employees reporting in/out of work. The rugged keypad includes 4 additional function keys to customize the reader for special requirements such as clock in/out, break in/out, job code entry, tip entry, etc.

A built-in scheduler and relay contact can ring an external bell/alarm to signify the start and close of work shifts. The relay can also be connected to a door strike/lock.
